

*“The highest quality product
in the quickest possible time”*

Established in 1984, Plastics Resources, Inc. (PRI) is a market-driven company focused on providing anti-static packaging solutions to the electronic industry customers throughout North America, Europe, and Asia. PRI also currently services niche market customers with custom extruded plastic products.

PRI manufactures a wide variety of stock and custom anti-static tubes to protect your electronic components, micro-devices, and connectors during shipping, storage, handling, and assembly operations. PRI also manufactures embossed carrier tape (tape and reel) solutions for suppliers and users of surface mount technology (SMT), thermoformed trays, and other devices that require assembly automation.

PRI is a solutions partner for hundreds of ESD shipping and handling end-users, suppliers, and service organizations.

In addition, PRI contains an ***in-house engineering and machine shop***. This ensures that you will be provided with the ***highest quality product*** delivered to you in the ***quickest possible time***.

PRI

PRODUCTS

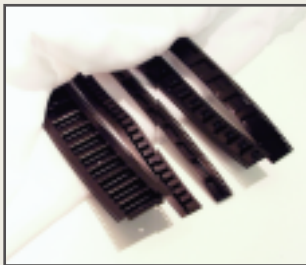

Anti-Static Shipping Tubes

PRI makes shipping tubes of any size or configuration up to 3" and is ready to work with your design people to ensure the best fitting tube for your product. Tubes are made of rigid, clear, anti-static PVC to protect leads and other delicate features of your product. A variety of colors are available upon request. Tubes can be punched for pin insertion or tabbed to eliminate the need for a plug or pin on one end for most products. PRI can even pre-insert a pin or plug in one end to save you time. PRI offers a wide variety of plugs and pins to fit your tubes. If we don't currently have it, we can help you produce it.

Carrier Tape

PRI can make carrier tape to fit your parts in 16mm, 24mm, 32mm, and 56mm widths. PRI can provide either Polystyrene for cost-savings or Polycarbonate for more durability. While some companies

limit the types of quantities they will do, we can handle low as well as high production runs. Whatever your need, PRI will try to fill it.

Thermoformed Trays

We at PRI are now able to produce the trays that you are looking for. Our machinery allows us to use up to 30" x 30" of forming area to give you the part that you or your customers need. Whether your tray is small or large we are anxious to provide the service and part that you require to meet your needs. PRI specializes in HIPS material as well as PVC and PETG, so your options are limitless.

Custom Plastic Extrusions

At PRI anything is possible. Whether you have a design you currently use or you are in the design phase, our engineering staff can help you obtain the shape, size, and material you require. PRI personnel have over 20 years of design experience, so you'll get a great product at the best price.

SERVICES

■ Part Inspection with Smartscope MVP

■ Design Engineering

■ Full CAD Design Capabilities

AutoCad	Solidworks
MasterCam	File Compatibility
Espirit W	-dxf, dwg, igs, sat, stp, stl, iso

■ Machining

With an in-house machining facility, PRI easily enables its customers to modify their tooling, or to make completely custom tooling from the start. PRI's top of the line machinery allows literally anything to be done in a timely manner and with the same first class quality that PRI has maintained since the company's conception. If you or your customer needs tooling or metal work produced that is unrelated to plastics, don't worry, PRI has done a great deal of outside work for the government and other companies that demand tight tolerances as well.
